

## ABSTRACT OF THE DISCLOSURE

According to the invention, the implant for treating  
5 rectocele and/or prolapsus of the vaginal fornix presents a  
structure that is thin and flexible and includes a support  
body from which there extend at least:

- two upper suspension stabilizers disposed on either  
side of a sagittal plane; and
- 10 - two lower suspension stabilizers disposed on either  
side of the sagittal plane.
